

Public Synthetic Sample Report

Proxmox Migration Readiness

VMware -> Proxmox public decision preview

Northbridge Industrial Group

Synthetic public sample. No customer data. No production access. No migration execution.

READINESS

64/100

Medium posture

CONFIDENCE

58/100

Limited evidence

PREVIEW SCOPE

Public

Commercial sample

PUBLIC SAMPLE MODULES

Executive Summary, Environment Overview, Readiness Score, Evidence Confidence, Top Risks, Evidence Matrix, VM Classification Preview, Migration Wave Preview, Proxmox Sizing Preview and Next Steps.

Use this public sample to understand the methodology. Use the premium sample to review deeper storage, licensing, continuity, advisor and blueprint modules.

Executive Summary

A concise commercial view of migration posture, confidence and next actions.

Northbridge Industrial Group has a medium VMware -> Proxmox migration readiness posture. This public sample shows how Shift Evidence separates readiness, evidence confidence and migration risk before a customer uploads approved evidence.

PUBLIC SAMPLE PURPOSE

This version is intentionally shorter than the premium sample. It sells the methodology without exposing every premium module.

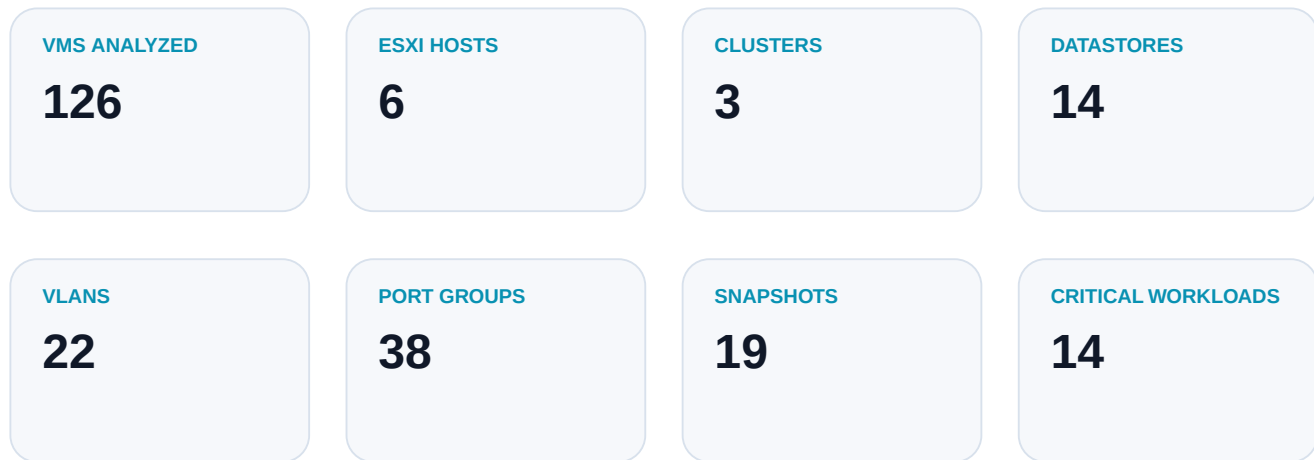

What this public sample demonstrates

- Readiness and Evidence Confidence are separate decision signals.
- Missing evidence is surfaced as decision value, not hidden.
- Top risks and migration waves are tied to evidence gates.

Environment Overview

Synthetic environment snapshot used for the public decision preview.

Workload mix preview

Category	Count	Interpretation
Web / utility	34	Good Wave 1 candidates after pilot validation.
SQL / database	12	Requires backup restore evidence and performance review.
ERP / line of business	4	Hold until dependency and rollback plans are signed off.
Domain services	6	Special sequencing, identity rollback and replication checks required.
File / storage-heavy	18	Storage target and throughput validation required.

Readiness Score

Readiness is a planning signal, not migration authorization.

READINESS SCORE

64/100

Medium readiness

EVIDENCE CONFIDENCE

58/100

Limited confidence

STORAGE PREVIEW

52/100

Needs validation

A 64/100 readiness score means some workloads can be considered for a controlled pilot. It does not mean the full environment is ready for production migration.

DECISION GUARDRAIL

Do not use estimated savings alone as a go/no-go criterion. Evidence, rollback and owner approval gates still apply.

Evidence Confidence Score

Confidence changes how strongly a recommendation can be trusted.

Evidence matrix preview

Evidence	Status	Confidence	Action
RVTools inventory	Received	High	Inventory baseline is usable.
Technical context	Received	Medium	Enough for a first decision pack.
Backup restore evidence	Missing	Low	Blocks critical workloads.
Application dependencies	Partial	Low	ERP, SQL and identity dependencies need mapping.
Performance history	Missing	Low	Sizing confidence remains limited.
Network / VLAN mapping	Partial	Medium	Port groups known; target design pending.

Missing evidence value

- Backup restore evidence blocks critical workload approval.
- Application dependency gaps change wave sequencing.
- Performance history improves sizing confidence.

Top Risks

Public sample risk view focused on executive action.

Risk preview

Risk	Severity	Area	Recommended action
Backup evidence missing	Critical	Business continuity	Run restore validation before SQL/ERP/DC waves
Application dependencies incomplete	High	Migration sequencing	Build dependency map and owner sign-off
Datastores above 80%	High	Storage capacity	Validate target capacity and evacuation plan
Old snapshots detected	High	Operational hygiene	Clean up or approve exceptions
Network target incomplete	Medium	Cutover risk	Confirm Proxmox bridge/VLAN design

BUSINESS CONTINUITY NOTE

Backup, dependency, rollback and maintenance-window evidence should be validated before critical workloads enter production waves.

VM Classification Preview

A small sample of VM-level recommendations.

Workload decisions preview

VM	Role	Complexity	Wave	Reason
web-portal-01	Web app	Low	Wave 1	Low dependency and rollback-friendly.
fileserver-02	File server	Medium	Wave 2	Storage-heavy and user-facing.
sql-prod-01	Database	High	Wave 3	Requires restore test and performance baseline.
dc-main-01	Domain controller	High	Wave 3	Identity sequencing and rollback required.
erp-prod	ERP	Critical	Hold	Do not move until dependencies and backups are proven.
backup-proxy	Backup service	High	Wave 0	Backup chain is part of rollback posture.

Migration Wave Preview

Waves show sequencing logic without becoming an execution plan.

Migration waves preview

Phase	Purpose	Candidate scope	Evidence to unlock
Wave 0	Validation / pilot	Monitoring, utility workloads, import test	Restore test, target network, rollback plan
Wave 1	Low-risk workloads	Web, utility, low-dependency services	Pilot success and owner approval
Wave 2	Standard production	File services and standard apps	Storage throughput, backup proof, dependency map
Wave 3	Critical systems	SQL, ERP, identity	Executive go/no-go, restore tests, maintenance windows
Hold	Blocked workloads	ERP and unknown-owner systems	Dependency evidence and rollback maturity

NO AUTOMATIC MIGRATION

This report does not migrate workloads. It helps teams decide what evidence must be gathered before migration planning.

Proxmox Sizing Preview

Directional sizing signals for sales and discovery conversations.

RECOMMENDED NODES

3-4

HA-capable target

RAM TARGET

1.8-2.5 TB

Allocation-based

USABLE STORAGE

70 TB+

Validate growth

SIZING GUARDRAIL

Sizing without performance history has limited confidence. Capacity, IOPS and growth assumptions must be validated before purchase or production migration.

Commercial Bridge

How the public sample connects to paid deliverables.

Professional Assessment

- Private evidence-backed readiness report.
- VM risk matrix and migration decision pack.
- Evidence confidence, missing evidence and top-risk prioritization.

Migration Blueprint

- Scoped waves and validation gates.
- Rollback expectations and remediation planning.
- Deeper review for production migration decisions.

What The Premium Sample Adds

The premium sample v2 remains the deeper technical reference.

Premium-only depth

- Storage Destination Readiness and Ceph/shared storage considerations.
- Licensing & Cost Exposure and Business Continuity Risk.
- Full VM Risk Matrix, Senior AI Advisor Q&A and Project Memory decisions.
- Migration Blueprint bridge with validation gates and rollback expectations.

DIFFERENT PURPOSE

Public sample sells the method. Premium sample demonstrates the deeper consulting-style deliverable.

Assumptions & Disclaimers

Boundaries that keep the sample safe and honest.

Public sample boundaries

- Synthetic sample only. No customer data, no production access and no real customer conversation.
- Shift Evidence does not migrate VMs and does not guarantee zero downtime.
- Pricing and sizing references are estimates, not financial quotes or vendor contracts.
- This report does not replace expert validation, pilot testing, restore proof or owner sign-off.

Next Steps

Move from public sample to controlled evidence-based assessment.

Use this public sample to understand the structure and value path before uploading approved VMware evidence.

Recommended path

Step	Action	Purpose
1	Watch 90-second simulation	Understand the value path quickly.
2	Explore demo workspace	Review synthetic scenarios and demo reports.
3	Start Professional Assessment	Create a private evidence-backed decision pack.
4	Request Migration Blueprint	Plan waves, gates, rollback and remediation.
