

# Proxmox Migration Readiness

## VMware -> Proxmox Migration Planning

ACME Manufacturing Group

Based on synthetic infrastructure evidence. No customer data.

### SCOPE

126 VMs / 6 ESXi hosts / 3 clusters / 14 datastores

### USE

Commercial sample for understanding the deliverable before uploading real evidence.

# Executive Summary

ACME Manufacturing has a medium migration readiness posture based on the evidence provided. The VMware inventory is usable for an initial assessment, but backup evidence, application dependency mapping and Proxmox target validation are missing or incomplete.

## MEDIUM READINESS

Low-risk workloads may be candidates for a pilot after validation.

## LIMITED CONFIDENCE

Critical workloads require validation before entering a migration wave.

**Recommendation: do not include SQL, ERP, domain controller or storage-heavy workloads in early waves until restore points and dependencies are validated.**

# Environment Overview

VMS

**126**

ESXI HOSTS

**6**

CLUSTERS

**3**

DATASTORES

**14**

PORT GROUPS

**38**

VLANS

**22**

SNAPSHOTS

**19**

Environment evidence starts with RVTools-style inventory. This sample intentionally keeps backup, dependency and performance evidence incomplete to show how confidence changes.

# Readiness Score

## MIGRATION READINESS SCORE

# 64/100

Medium readiness

A 64/100 score indicates that some low-risk workloads may be suitable for a pilot after validation. It does not mean the environment is ready for broad migration execution.

## WHAT LOOKS VIABLE

Web, utility and low-dependency workloads can be reviewed as early pilot candidates.

## WHAT NEEDS CAUTION

Identity, database, ERP and large-storage systems should wait for manual validation.

# Evidence Confidence Score

EVIDENCE CONFIDENCE SCORE

**58/100**

Limited evidence

RVTools and technical context are enough for a first assessment, but backups, application dependencies, performance history and final Proxmox target assumptions are incomplete.

**A high readiness score with low confidence is not enough. ShiftReadiness separates migration posture from evidence completeness.**

# Evidence Matrix

| Evidence                 | Status   | Confidence |
|--------------------------|----------|------------|
| RVTools Inventory        | Received | High       |
| Technical Context        | Received | Medium     |
| Backup Evidence          | Missing  | Low        |
| Application Dependencies | Missing  | Low        |
| Proxmox Target           | Partial  | Medium     |
| Network Mapping          | Partial  | Medium     |
| Performance History      | Missing  | Low        |

# Top Risks

**CRITICAL**

Backup evidence missing

**HIGH**

Application dependencies missing

**HIGH**

Old snapshots detected

**HIGH**

Large disks above 2 TB

**MEDIUM**

Multi-NIC workloads

**MEDIUM**

Outdated VMware Tools

**HIGH**

Datastores above 85%

**CRITICAL**

Critical workloads require manual review

# VM Classification Preview

| VM            | Role              | Complexity | Action           |
|---------------|-------------------|------------|------------------|
| web-portal-01 | Web App           | Low        | Wave 1           |
| fileserver-02 | File Server       | Medium     | Validate storage |
| sql-prod-01   | Database          | High       | Manual review    |
| dc-main-01    | Domain Controller | High       | Special plan     |
| erp-prod      | ERP               | Critical   | Hold             |

Not every VM should move in the same wave. Complexity bands help separate pilot candidates from workloads requiring special planning.

# Proxmox Sizing Preview

RECOMMENDED NODES

**3-4**

RAM TARGET

**1.8-2.5 TB**

USABLE STORAGE

**70 TB+**

BACKUP CAPACITY

**90 TB**

HA READINESS

**Conditional**

NETWORK READINESS

**Requires  
mapping**

Sizing is based on allocation, not historical performance. Add monitoring data for higher confidence.

# Migration Wave Preview

| Wave   | Purpose                 | Sample guidance                                    |
|--------|-------------------------|----------------------------------------------------|
| Wave 0 | Pilot                   | Validate assumptions with non-critical candidates. |
| Wave 1 | Low-risk workloads      | Simple workloads after evidence review.            |
| Wave 2 | Standard production     | Requires dependency and backup validation.         |
| Wave 3 | Critical systems        | Identity, database and ERP-like systems.           |
| Hold   | Not ready               | Blocked until missing evidence is resolved.        |
| Retire | Decommission candidates | Review before migration spend is allocated.        |

# AI Advisory Notes

Simulated advisory for sample report. AI Advisory supports the assessment. It does not replace deterministic readiness and confidence scores.

**Backup evidence was not provided. Do not include critical workloads in early waves until restore points are validated. The first pilot should focus on low-risk workloads with clear rollback and backup validation.**

## CONFIDENCE IMPACT

Missing backup and dependency evidence lowers confidence for production waves.

## NEXT QUESTIONS

Which applications depend on SQL, ERP and domain controller workloads?

# Required Validations

- Backup restore points
- Application dependency map
- Proxmox target capacity
- Network/VLAN mapping
- Performance history
- Pilot import test

**Resolve these items before treating this sample posture as implementation-ready.**

# Next Steps

- Upload RVTools export
- Complete technical context
- Add backup evidence if available
- Validate Proxmox target
- Generate full readiness report
- Plan pilot wave

## START

Upload RVTools and complete technical context.

## THEN

Generate a real readiness report from your own evidence.

# What This Sample Does Not Prove

- It does not migrate VMs.
- It does not guarantee zero downtime.
- It does not replace a pilot.
- It does not prove backup restorability without backup evidence.
- It does not infer application dependencies that were not provided.
- It does not use customer data.

**This sample is designed to show the report format and decision value. It is not a migration tool and it does not use customer data.**

# Ready To Assess Your Own Environment?

Use the replay to understand the process, then use this sample to understand the deliverable. When ready, start a real readiness assessment with your own approved evidence.

## REPLAY

Watch the Migration Readiness Replay.

## ASSESS

Start a readiness assessment.

## REVIEW

Book a readiness review.
